Using statistics to compare data between groups; 5. Conducting correlations and regressions. Together, these represent the key tasks biologists need to be able to carry out to start analysing their data using R. This means it provides the perfect practical introduction for any biologist interested in learning how to use R to do statistics.

Introduction. Statistics has a significant part in the field of data science. It helps us in the collection, analysis and representation of data either by visualisation or by numbers into a general understandable format. Generally, we divide statistics into two main branches which are Descriptive Statistics and Inferential Statistics.
