• Geometric modeling is only a means not the goal in engineering. • Engineering analysis needs product geometry; the degree of detail depends on the analysis procedure that utilizes the geometry. • There is no model that is sufficient to study all behavioral aspects of an engineering component or a system.

Geometry Modeling. Here, we investigate geometry modeling. Nowadays, computer-aided engineering (CAE) is an important section in engineering analysis. Before CAE, we should also know about computer-aided design (CAD) and geometry modeling. CAD tools make us capable of building geometry models of solid objects and empty spaces.

One advantage of using Grasshopper for parametric design and geometry modeling is that, during the CAD model generation, one can design the generative algorithm to ensure that the resulting IGA model is analysis-suitable. The concept of parametric modeling is central to design in many fields of engineering and beyond (e.g., architecture ).
