Analytical pyrolysis is a useful technique for breaking down organic macromolecules into smaller fragments amenable to GC and mass spectrometry, and metastable reaction monitoring (Summons et al., 1992). It is often used to help characterize geo- and biomacromolecules and detect their biomarkers (Peters et al., 2005).

Analytical pyrolysis-GC/MS proved to be a valuable hyphenated technique for the analysis and identification of synthetic organic polymeric materials. This technique allows the direct analysis of very small sample amounts (5–200 μg) without the need of time-consuming sample preparation.
