If the setting is "on", the fan will run constantly, even when the system isn't cooling the air. This could result in warmer air blowing from the registers when the AC unit isn't operating. Changing the fan setting to "auto" will resolve the issue by turning off the blower when the system is not actively cooling.

### Troubleshoot an Air Conditioner | AC Troubleshooting | Carrier

Open the door panel to get access to your Carrier furnace. Locate the current filter. Usually found where the cold air enters the unit, either in the cold air return duct or the entrance to the blower chamber. Take out the old air filter and replace it with a new one.
