Get Free Climate Change Pogil Answer Key

The global mean temperature would be -18°C rather than $+15^{\circ}\text{C}$. Two-thirds of this approximately 33°C difference in temperature brought about by the natural greenhouse effect is attributable to atmospheric vapour. The rest is made up of carbon dioxide (21%) and to a lesser extent trace gases and aerosols.

Global climate change

Recent climate change models suggest that as the planet warms, rainfall in this region will drop and temperatures will rise. Use the information from this activity to answer the following questions. What characteristics of the grasslands biome make it a critical source of food for the U.S. and other countries?
