The design of a research topic explains the type of research (experimental, survey, correlational, semi-experimental, review) and also its sub-type (experimental design, research problem, descriptive case-study). There are three main types of research design: Data collection, measurement, and analysis. The type of research problem an organization is facing will determine the research design and not vice-versa.

Research Design and Research Methods CHAPTER 3 This chapter uses an emphasis on research design to discuss qualitative, quantitative, and mixed methods research as three major approaches to research in the social sciences. The first major section considers the role of research methods in each of these approaches.

Research Design and Research Methods

Research design is a plan to answer your research question. A research method is a strategy used to implement that plan. Research design and methods are different but closely related, because good research design ensures that the data you obtain will help you answer your research question more effectively. Which research method should I choose?
