Facies Interpretation And The Stratigraphic

8. Sequence Stratigraphy of Sartakht Formation in Bakshli Section. Sequence stratigraphy is a method of classifying and interpreting sedimentary rocks and fossils in terms of variations in the environments [39] . The variation in the weather and sea level can be detected through careful analysis of sequence stratigraphy [40] .

Stratigraphy From a stratigraphic point of view, Opalinus Clay is underlaid by the Staffelegg Formation and overlain by the Passwang Formation, both calcareous facies. At the rock laboratory, the Opalinus Clay exhibits a thickness of around 130 m and was deposited over a period of some 400,000 years.

Facies and sequence-stratigraphic analysis identifies six high-resolution sequences within upper Campanian strata across about 120 miles of the Book Cliffs in western Colorado and eastern Utah.

Facies Analysis and Sequence Stratigraphic Framework of Upper

A sequence-stratigraphic analysis was carried out by integrating lithostratigraphic marker beds, facies cycles, bio- and chemostratigraphy. The investigated outcrop section was subdivided into six third-order sequences, named KS 6 to KS 1. KS 6–KS 5 are interpreted to correspond to the Murgabian to Midian (ca. Wordian to Capitanian) stages.

Description The 2e of Seismic Stratigraphy and Depositional Facies Models summarizes basic seismic interpretation techniques and demonstrates the benefits of integrated reservoir studies for hydrocarbon exploration. Topics are presented from a practical point of view and are supported by well-illustrated case histories.

The Khufai Formation is the oldest carbonate platform of the Cryogenian to lowermost Cambrian Huqf Supergroup. A stratigraphic characterization of this unit includes detailed facies descriptions, a sequence-stratigraphic interpretation, and evaluation of lateral heterogeneity and overall ramp evolution. The Khufai Formation comprises one and one-half depositional sequences with a maximum flooding interval near the base of the formation and a sequence boundary within the upper peritidal facies.

This may lead to confusion when revisions of interpretation have to be made because of new or more accurate information about the rocks themselves. Just as there are regular associations of different local environments in modern sedimentary basins, associations of facies also are known to follow similar patterns in the stratigraphic column.

Seismic facies are "mappable, three dimensional seismic units composed of groups of reflections whose parameters differ from those of adjacent facies units". Seismic facies analysis is the description and interpretation of seismic reflection parameters, such as configuration, continuity, amplitude , and frequency , within the stratigraphic framework of a depositional sequence.

In geology, a facies (pronounced variously as /ˈfeɪʃiːz /, /ˈfeɪsiːz / or /ˈfæʃiːz / [ˈfaysheez, ˈfayseez or ˈfash-eez]; plural also ˈfacies) is a body of rock with specified characteristics, which can be any observable attribute of rocks (such as their overall appearance, composition, or condition of formation), and the changes that may occur in those attributes over a geographic area.

The stratigraphic interpretation and modeling of sedimentary successions, and characterization of facies deposits, suggests that the Snake Cave Interval has excellent stratigraphic traps, as braided fluvial and single-story channel sandstone body sediments are good potential reservoirs.

Standard interpretation methods were used to correlate and calibrate the seismic reflection profile grid. Sequence stratigraphic analysis followed Mitchum et al. (1977) for the identification and mapping of candidate sequence boundaries. Analysis of seismic facies within each depositional sequence followed Ramsayer (1979).

Seismic stratigraphy techniques help us for stratigraphic interpretation of seismic reflectors. It is important because geological concepts of stratigraphy can be applied on seismic data and hence, seismic stratigraphy can be used as a predictive tool for petroleum system elements like reservoir, seal and source rock.
