allows you to simulate the flow of fluids in complex networks, taking into account the phase state of the fluid and determining heat changes. FluidFlow is more than a pipe network analysis program, it is a fully developed steady-state process-flow simulator. System Requirements! 1024 MB RAM (2048 MB recommended).

Quick Start Guide - FluidFlow
Multiple flow controllers in a network could occasionally cause convergence BEFORE the network has actually converged. See changes above. Liquid line with heat transfer in buried pipes, sometimes calculated out phase state as two-phase when phase state should be liquid. Pipe scaling was not read in properly from old files (pre V3.30).
