The folded unipole antenna is a type of monopole antenna; it consists of a vertical metal rod or mast mounted over a conductive surface called a ground plane. The mast is surrounded by a "skirt" of vertical wires electrically attached to the top of the mast. The skirt wires are connected by a metal ring at the bottom and the feed line is connected between the bottom of the wires and ground. It has seen much use for medium wave stations in the United States, and other countries as well. When an A

Abstract: Folded unipole antennas less than a quarter wavelength long are used to transform the input resistance of short vertical antennas to a more acceptable value by effecting a transformation within the antenna itself. An equivalent circuit of the folded unipole is derived.

The useful folded unipole - Radio World

A folded dipole is an antenna, with two conductors connected on both sides, and folded to form a cylindrical closed shape, to which feed is given at the center. The length of the dipole is half of the wavelength. Hence, it is called as half wave folded dipole antenna. Frequency range

Antenna Theory - Half-Wave Folded Dipole - Tutorialspoint

The folded dipole antenna consists of a basic dipole, but with an added conductor connecting the two ends together. This makes a 'loop' of wire that is a short circuit to DC. As the ends appear to be folded back, the antenna is called a folded dipole antenna. The basic format for the folded dipole aerial is shown below.

Antenna Theory Home Page. Next: Small Loop Antennas. A folded dipole is a dipole antenna with the ends folded back around and connected to each other, forming a loop as shown in Figure 1. Figure 1. A Folded Dipole Antenna of length L. Typically, the width d of the folded dipole antenna is much smaller than the length L.

Folded Unipole Antennas: Theory and Applications

The folded unipole antenna was first devised for broadcast use by John H. Mullaney, an American radio broadcast pioneer, and consulting engineer. It was designed to solve some difficult problems with existing medium wave (MW), frequency modulation (FM), and amplitude modulation (AM) broadcast antenna installations.
