A standby database is a transactionally consistent copy of an Oracle production database that is initially created from a backup copy of the primary database.. Once the standby database is created and configured, Oracle Data Guard automatically maintains the standby database by transmitting primary database redo data to the standby system, where the redo data is applied to the standby database.

Getting Started with Oracle Data Guard

Before you begin using Data Flow, you must have: An Oracle Cloud Infrastructure account. Trial accounts can be used to demo Data Flow. A Service Administrator role for your Oracle Cloud services.
