catchment behaves exactly as the HBV model sees the world, therefore you might be able to achieve a perfect fit ($R_{eff}=1$). Try to calibrate the model.

UZH - Department of Geography - Exercise 1: HBV-land

The version of the model used in this study, HBV Light (Seibert 1996) corresponds to the version described by Bergstrom (1992) with only two slight changes. Instead of using initial states the new version uses a warming-up period, i.e., the simulation period is preceded by a period during which rough estimates of the initial state val-

Estimation of Parameter Uncertainty in the HBV Model

With the previous HBV model, there was this possibility to add the stations and their weights to the model. I was wondering if it is possible to do so in the HBV light? For now, I am doing the ...

How can I add stations to HBV-Light

model?

For each glacierized part of an elevation zone in HBV-light, the corresponding non-glacierized part is used to exchange the area for which the state changed from glacier to non-glacier and vice versa. In order to ensure the water balance is correct, "bookkeeping" is done between the corresponding glacierized and non-glacierized zones.

Technical note: Representing glacier geometry changes in a semi ...
