Hid Lamp Ballast Application Guide

HID lamps require a ballast to operate. Typically, the HID ballast (sometimes with the addition of a capacitor and igniter) serves to start and operate the lamp in a controlled manner. HID lamps take several minutes to warm-up. Full light output is reached after the arc tube temperature rises and the metal vapors reach final operating pressure.

HID Ballast Application Guide - Lighting Controls

GENERAL BALLAST DESCRIPTION HID lamps provide light from an electric discharge or arc and have a negative resistance characteristic that would cause them to draw excessive current leading to instant lamp destruction if operated directly from line voltage. The ballast is a power supply for arc discharge lamps. Its purpose in HID lighting is
