Glue colored construction paper onto the front to make the face of the clock. Use a ruler and start by marking 12, 3, 6, and 9 on the small circle. Stick on the corresponding number stickers in those areas. Then using the ruler to make sure all the spaces are even add the rest of the number for the face of the clock.

How to Make a Cardboard Clock: A Learning Tool for Kids ...

A digital clock is a type of clock that displays the time digitally (i.e. in numerals or other symbols), as opposed to an analogue clock, where the time is indicated by the positions of rotating hands.. Digital clocks are often associated with electronic drives, but the "digital" description refers only to the display, not to the drive mechanism.

Digital clock - Wikipedia

So we've got a nice looking digital clock. It's got one last problem, though. It's showing 24-hour time. Let's make it a 12-hour clock and label AM and PM. Let's start by adding a new variable at the top of our code. Before our little stack of #/then conditions, let's add a new line and add a new variable we're calling meridiem

Digital Clock | Coder Projects

The simplest Arduino LCD clock ever designed. Only needs an Arduino UNO, a 1602 LCD, and two buttons. No resistors, no potentiometer. By plouc68000.
