Mcalpine's multiple sclerosis (Book, 2006) [WorldCat.org]

Multiple sclerosis (MS) is a potentially disabling disease of the brain and spinal cord (central nervous system). In MS, the immune system attacks the protective sheath (myelin) that covers nerve fibers and causes communication problems between your brain and the rest of your body.Eventually, the disease can cause permanent damage or deterioration of the nerves.

Multiple sclerosis - Symptoms and causes - Mayo Clinic

Multiple sclerosis (MS) is a progressive, immune-mediated disorder. That means the system designed to keep your body healthy mistakenly attacks parts of your body that are vital to everyday function.

Multiple sclerosis - Diagnosis and treatment - Mayo Clinic

The aetiology of multiple sclerosis (MS) is generally thought to be a complex interplay between genetic 1 and environmental 2,3 factors. The findings regarding environmental factors have been inconsistent, 4 however, and many single observations on the possible role of factors such as infection 5 or diet 6 have later often not been confirmed when systematically analysed in larger populations.

The risk for multiple sclerosis in female nurse ...

Introduction. Multiple sclerosis (MS) is the most common disease of the central nervous system that causes destruction of the myelin sheath of nerve cells and the most common cause of disability in adolescents and young adults.[1] From etiology, probably, the destruction of myelin tissue is due to nerve tissue sporadic attacks on the immune system that were caused by an abnormal immune response.[

Estimated Incidence Rate of Multiple Sclerosis and Its ...

(Fillin is "Multiple Sclerosis") The vast majority is XS to standard clinical practice, since clinical practice amounts to about eight or ten meds, with several new ones coming on soon. So there's not much to do but slow disease progress, and hope that the disease is indolent and leaves the patients alone for about twenty or thirty years.
