An introduction to neural networks for beginners

Neural networks are artificial systems that were inspired by biological neural networks. These systems learn to perform tasks by being exposed to various datasets and examples without any task-specific rules. The idea is that the system generates identifying characteristics from the data they have been passed without being programmed with a pre-programmed understanding of these datasets.

Now, you should know that artificial neural network are usually put on columns, so that a neuron of the column n can only be connected to neurons from columns $n-1$ and $n+1$. There are few types of networks that use a different architecture, but we will focus on the simplest for now. So, we can represent an artificial neural network like that :
