A rebar cage for a drilled shaft is made up of longitudinal bars that are normally distributed with equal spacing around the outside of a cylinder. Transverse reinforcing is placed around and attached to the longitudinal bars, with the longitudinal and transverse steel being held together with ties, clamps, or, in special cases, with welds.

Chapter 8 - Rebar Cages - Pile Buck Magazine

Our unique rebar cage design allows for a sturdier cage, and due to our internal support mechanism design, our cages maintain their structural integrity beyond the engineered specifications. This results in best-in-class quality & safety — a product that contractors want because of its unique strength, and its design makes it easier to handle and simpler to install.
