(PDF) Recommender Systems: An Overview

A recommender system, or a recommendation system (sometimes replacing 'system' with a synonym such as platform or engine), is a subclass of information filtering system that seeks to predict the "rating" or "preference" a user would give to an item. They are primarily used in commercial applications. . Recommender systems are utilized in a variety of areas and are most commonly recognized as ...

Recommender system - Wikipedia

Recommender Systems are the most valuable application of Machine Learning as they are able to create a Virtuous Feedback Loop: the more people use a company's Recommender System, the more valuable they become and the more valuable they become, the more people use them. Once you enter that Loop, the Sky is the Limit.
